Celebrating 100 Years in Business 1906 – 2010

Offering a Guarantee of Personal Service

Personalised and Professional Woolbrokers and Stock and Station Agents

Schute Bell Badgery Lumby is a highly recognised and respected name throughout New South Wales and Queensland. We pride ourselves on offering a service that is second to none in the agency industry.

Schute Bell has highly skilled and experienced staff that can help you maximise your returns and grow your enterprises.

We specialise in Wool, Livestock, Property, Finance and Insurance.

This season Schute Bell Badgery Lumby celebrates its Centenary Year. We are enormously proud of this and the Strong Proud Tradition that has been built over the last 100 years. This strong and reliable tradition continues today and will forge on into the future.

We pride ourselves on being Clip Preparation Specialists

Wool Livestock Property Finance Insurance

The objectives of the Schute Bell ANFD Merino Wether Comparison 2015 – 2018 are:

- 1.1 To demonstrate under equivalent commercial conditions, the relative productivity of flocks of merino sheep flocks for economically important characteristics. These include fleece weight, fibre diameter, and wool value and assessed meat value.
- 1.2 To provide a forum for the exchange of ideas and information amongst producers and others involved in the merino industry.
- 1.3 To assist participant breeders to assess their progress towards their breeding objective(s) by giving a 'benchmark' comparison with others in the industry by having links to other wether comparisons
- 1.4 To provide a comparison within bloodlines of the economics of shearing at 9 and 12 months.
- 1.5 Detailed records will be kept of the varied management practices required for both 9 month and 12 month shearings. These will be costed accordingly.
- 1.6 The Australian National Field Days / Schute Bell Merino Wether Comparison will be controlled by the Orange Field Days Co-operative Ltd, Australian National Field Days representatives and such persons as are necessarily co-opted by The Australian National Field Days
- 1.7 All decisions of the Australian National Field Days shall be final and binding.
- 1.8 The Australian National Field Days / Schute Bell Merino Wether Comparison will be carried out over a 3 year period or such other period as the committee shall decide.
- 1.9 The Australian National Field Days is open to any strain or bloodline of merino wether bred by the entrant.
- 1.10 All teams both 12 month and 9 month shearing will be depastured and managed under identical conditions at all times, by Australian National Field Days.

Decisions about changing bloodlines should be based on a larger data set than this individual trial. The combined wether trial analysis from Department of Trade and Investment, Regional Infrastructure and Services and Australian Wool Innovation provides a more accurate ranking of bloodlines. The combined wether trial analysis is available from your local Sheep & Wool Officer or by visiting www.merinobloodlines.com.au

2018 – 3rd Year Chairman's Report

The 2015 – 2018 Schute Bell/ANFD Wether Trial has just completed the 4th 9 Month shearing and 3rd 12 Month shearing conducted on the 8th & 9th September 2018

Firstly, I would like to thank all the entrants for participating in the 2016-2018 ANFD/Schute Bell Wether Trial.

We have had three very different years, throwing up a wide range of climatic circumstances. This has made it very interesting looking how the different bloodlines and types of merinos have handled the conditions, some teams having a few sheep being affected with three or four teams having the whole team affected.

- Year 1 - A record wet year with associated health, wool and nutritional issues.
- Year 2 - Started with very good carryover feed from the wet year and developed into a dry, cold Tableland winter with a late spring flush. A good merino year with the sheep doing very well.
- Year 3 – A dry year with the developing drought with probably the hardest winter that the Tablelands can throw up. The field day site faired a lot better than most areas and the wethers getting through in mainly a good average 2 score condition.

The primary purpose of this wether trial was to compare the cost effectiveness of early shearing in relation to a normal 12-month shearing. We found varying results between the bloodlines and types of wool. On a straight fleece weight basis, most teams did have a higher wool cut in the 9-month shearing group. However, on a gross margin basis, the 12-month group was generally ahead by varying amounts.

What we have seen over this trial has been the big improvement in fine wool prices in relation to the medium wools, thus we have seen a jump in those finer teams.

Some points of interest to look at in these results are:

- All top end teams had a combination of heavier wool cuts for micron, very good style and handle.
- Of note is the extent of the range of gross margins over the whole trial group, top to bottom!!!!
- Bloodlines that have bred overlong fleeces for the market have attracted price discounts, quite significant in the case of the finer wools. This has greatly affected the gross margin for those teams in the 12-month group.
- The 9-month shearing has seen no discount for length and most teams have been in the right length for micron. There were no sub 70 mm wools in the 9-month shearing group to attract the shorter wool discounts which are in play in this current market.
- For people shearing at 6/7 months with wools within 50/60 mm length range, you could be looking at discounts of between 100 and 200 cents depending on micron.
- The gross margins on those shorter wools would be significantly less, but we have not been able to measure that in this trial.

Nov 17	Drench all wethers with Nilverm
Dec 17	Shearing 9-month wethers Paddock rotation
Jan 18	All wethers treated with click 25ml
April 18	All drafted into teams and penned for Sheep Field Day
May 18	Supplementary feeding Barley and Oaten hay and paddock rotation
June 18	Supplementary feeding Barley and Oaten hay
Jul 18	All drenched with 16 ml Hatrix
Aug 18	Mid side sampling 9- and 12-Months wethers
Sept 18	Saturday 8 Sept Shearing 9 months wethers Sunday 9 Sept Shearing 12 months wethers All wethers fat scanned and weighed
Oct 18	Trucked to Southern Meats in Goulburn

Wool Report 2018

The 2015 to 2018 ANFD trials are well and truly under way. Shearings have been split over a 9-month trial as well as usual 12 month trial period.

ANFD wether trial 2018 Judges Report

The 2018 ANFD wether trial draws to a close after another two successful days in the shearing shed on the 8th and 9th of September 2018.

Day 1 saw the shearing of the various 9-month shearing teams with some interesting details. The fleeces certainly showed the impact of the season with some fine microns coming through. The finest micron recorded was in the mid 13 microns and a large number in the mid to high 15- and 16-micron groups. The staple strength was very good under the circumstances but sneaking in was a high positional base break due to the season. The brightness of the wool was excellent and the yield comparison reasonable for the style and shorter length of fibre. The fibre length was expected with a tested length of 66 mms in the top line and 68 mms in the slightly broader line. Overall the style was very good with page four or best topmakers being recorded. The skirting line had good bulk and length and minimal vegetable matter was seen in both fleece and skirting lines. Fleece weights were good with an average over the 4 kg mark.

Day 2 saw the shearing of the 12-month wool teams. Overall the wools were of a similar nature in style as the 9-month teams with best topmakers coming through in volumes. However, the length of fibre and weight were obviously more evident with fleeces cutting heavier weights compared to their 9-month counterparts. Some fleece lengths were overlong with lengths up in the 130mm area which are too long for the finer micron groups. The base break was more evident and lower tensile strengths recorded in the official test results by AWTA. Once again, the quality of the wool was very good with minimal vegetable matter in both fleece and skirting wools.

The finer fleeces have been sneaking forward over the duration of the competition due to the direction of the finer wool market especially during 2018. But quality is the key and we urge all wool growers to maintain whiteness and style and bulk in their dips into the future. As this current market is and will continue to reward wools with that better edge and obviously the heavier the fleece the more reward goes into your pockets.

The jury is still out for us personally whether you shear each 9 month or 12 months and that will depend on each and every individual's operation, but on these figures the heavier the fleece the more return was recorded on this current market. The other consideration is the cost of shearing and managing the sheep around a premature shearing operation especially in a dry period. But stating that, we see a reduction in wool prices for over length fine and super fine types and some are simply too long for type. Each individual will look into the figures provided and make up their own minds on how to run their shearing. But it gets back to our earlier point of cutting as much as you can of quality, white, stylish wool.

In general, an outstanding couple of days judging quality wools, it has been a pleasure for our company to judge the ANFD Trial over its duration and would like to thank the Committee and the ANFD for all the hard work they put into organising a great event.

We would like also to thank all the participants who took part as well as the shearing team who over the period of the trial deserve a special mention. It was a pleasure working with you all. Without your valued contribution this trial wouldn't be the success it is.

Yours Sincerely
Schute Bell Wool Team

Data Collection

The wethers were mid side sampled on 25th May 2018 and the shearing undertaken on 8th & 9th September.

The samples were sent to Riverina Wool Testers for testing, including fibre diameter, washing yield, staple length and staple strength. The washing yield was then converted into a Schlumberger yield (determined from the wool and vegetable matter base).

At shearing the individual fleeces were skirted and weighed (GFW) and then given an AWEX ID (type) classification by representatives from Schute Bell Badgery Lumby.

This information was then used to allocate an average price from the previous week's wool market on a clean wool basis. The team castline wool (PCS and BLS) was also valued and have been apportioned back to individual wethers.

The wethers were weighed pre-shearing and their fleece weights subtracted from their "in the wool" body weight, to produce an off shears live weight.

Individual Fleece Valuation Method

Each individual fleece is valued based on its own measured and visual traits (AWEX ID, measured length, strength, FD and Yield) using prices from the current wool market based on:

- Both shearing groups wool sold at Sydney Sale S13/19 - 27/09/2018

Explanatory Notes

FD	(Micron) is the measured average Fibre Diameter using Laser scan on a mid side sample taken prior to shearing.
FD Dev	Fibre diameter deviation – the difference +/- between the teams average FD and the overall average FD. Eg -0.5 = half a micron finer than the average.
GFW	Greasy fleece weight – the average skirted greasy fleece weight.
Total GFW	The total greasy wool weight including fleece, pieces and bellies.
Sch Yield	Is the estimated Schlumberger Yield based on the washing yield of the mid-side sample taken prior to shearing and the vegetable matter estimated at shearing.
CFW	Clean fleece weight – the average skirted clean fleece weight.
Total CFW	Total Clean Fleece Weight is based on the GFW and Sch Yield for fleece, pieces and bellies.
Fleece Price	Wool valuations are worked out using the average prices for sale week 7 of the 2014/15 wool selling season.
Rank	The teams are ranked from 1 to 29 based on teams average \$/head (Wool Value)
Averages	The measured averages for all teams.
Wool Value	Average total wool (FLC, PCS, BLS & STNPCS) value for the sheep present at shearing \$/head.
BWT	Average body weights. These are measured before shearing, with the fleece weights subtracted.
SL	Staple length of the fibre in millimetres.
SS	Staple strength of the fibre in Newtons/kilotex.
